Introduction

Thank you for using the products manufactured by our company. We will ensure your peace of mind with reliable quality and dedicated service. Please read this instruction manual carefully before installation, circuit connection, operation, and maintenance inspection to ensure correct use. Also, be sure to familiarize yourself with all safety information and precautions during use.

Product Usage Precautions:

- 1.This device may only be installed, commissioned, and maintained by qualified personnel.
- 2.Before installation, commissioning, and maintenance, disconnect both power supplies of this device.
- 3.Use a voltmeter to verify that the power supply has been disconnected.
- 4.The device must be reliably grounded as required.
- 5.Reset the cabinet door and arc chute (plate) before powering on the device.
- 6.Improper operation may result in electric shock, fire, or explosion.

I.Product Overview

The XLDS2 series belongs to PC-level Automatic Transfer Switching Equipment (ATSE). It is mainly used in two neutral-point grounded power supply systems with AC 50/60Hz, a rated voltage of 400V or below, and a rated operating current ranging from 16A to 3200A. When one power source malfunctions, it switches between power sources to ensure the reliability and safety of power supply.

This automatic transfer switching equipment has three positions: “I (Normal) Closed”, “II (Standby) Closed”, and “0 (Both Disconnected)”. It is widely applied in the automatic transfer between I (normal) power supply and II (standby) power supply in power supply systems, as well as the automatic transfer and safety isolation of two load devices.

The product complies with the standard GB/T 14048.11 《Low-voltage switchgear and controlgear - Part 6-1: Multi-functional equipment - Transfer switching equipment》.

II.Operating Conditions

- 2.1 Ambient Air Temperature: -5℃~+40℃, and the 24-hour average temperature shall not exceed +35℃.
- 2.2 Atmospheric Humidity:At the maximum temperature of +40℃, the relative humidity shall not exceed 50%;The monthly maximum relative humidity is 90% (higher relative humidity is allowed at lower temperatures). Appropriate measures shall be taken for condensation occasionally caused by temperature changes.
- 2.3 Installation Altitude: The altitude of the installation site shall not exceed 2000 meters.
- 2.4 Pollution Degree: The environmental pollution degree at the installation site is Grade 3.
- 2.5 Utilization Category: AC-33iB.
- 2.6 Electromagnetic Environment:
Suitable for Environment A;When used in Environment B, harmful electromagnetic interference may occur. Users shall take appropriate protective measures.

III.Transportation and Storage Conditions

- 3.1 During transportation, the product shall not be exposed to rain or snow.
- 3.2 Storage environmental conditions: Temperature ranges from -25℃ to +55℃, and relative humidity is not more than 95% (at 25℃).

IV.Product Model Definition

V.Product Function Introduction

Controller Code	Function Introduction
Type A	1.I (Normal)/II (Standby) power indicator, closing status indicator. 2.Active output for standby power indicator and closing status indicator ports. 3.Single-phase detection. 4. Automatic transfer and automatic restoration.
Type B	1.I (Normal)/II (Standby) power indicator, closing status indicator. 2.Active output for standby power indicator and closing status indicator ports. 3.Single-phase detection. 4.Automatic transfer and automatic restoration. 5.Passive fire protection linkage.6. Generator start function.
Type C	1.I (Normal)/II (Standby) power indicator, closing status indicator. 2.Active output for I (Normal)/II (Standby) power indicator and closing status indicator ports. 3.Three-phase overvoltage, undervoltage, and loss-of-voltage detection. 4.Automatic transfer and automatic restoration (default), customizable to automatic transfer without automatic restoration. 5.Passive fire protection linkage and passive feedback signal output. 6.Generator start function.7. DC24V auxiliary power input.8. Optional LCD split-screen display.
Type D	1.I (Normal)/II (Standby) power indicator, closing status indicator. 2.Active output for I (Normal)/II (Standby) power indicator and closing status indicator ports. 3.Three-phase phase failure, overvoltage, and undervoltage detection. 4.Automatic transfer and automatic restoration (default), user-configurable to automatic transfer without automatic restoration. 5.Passive fire protection linkage. 6.Generator start function. 7.DC24V auxiliary power input. 8. LCD Chinese text display. 9.Equipped with RS485 communication port.
Type F	1.I (Normal)/II (Standby) power indicator, closing status indicator. 2.Active output for I (Normal)/II (Standby) power indicator and closing status indicator ports. 3.Three-phase overvoltage, undervoltage, loss-of-voltage, and phase sequence detection. 4.Automatic transfer and automatic restoration (default), customizable to automatic transfer without automatic restoration. 5.Fire protection forced transfer port. 6.Power failure alarm port. 7.Switch failure alarm port. 8.DC24V auxiliary power input.9. Optional LCD split-screen display.

Functional Parameter Table

Item	Model	Type A	Type B	Type C	Type D	Type F
Rated Operating Voltage		AC400V 50/60Hz				
Auxiliary Operating Power Voltage		DC24V				
Voltage Measurement Range		40~300V				
Power Consumption		≤10W				
Operating Position		(Normal Close, Standby Close, Double Open) – 3 operating positions				
Operation Mode		Manual, Automatic			Manual, Automatic, Remote Control	Manual, Automatic
Display Mode		LED Indicator Status Display			LCD Display	LED Indicator Status Display
Transfer Mode		Automatic Transfer and Automatic Restoration		Automatic Transfer and Automatic Restoration / Automatic Transfer without Automatic Restoration		
Under-voltage Transfer Value		None		187V	160~200V Adjustable	187V
Over-voltage Transfer Value		None		263V	240~290V Adjustable	263V
Transfer Delay Function		None		0	0-180s Continuously Adjustable	0
Return Delay Function		None		0	0-180s Continuously Adjustable	0
Phase Failure Detection		Single-phase (Phase A)		Three-phase (A, B, C)		
Power Supply Over/Under Voltage and Phase Sequence Error Alarm Output		None				Yes
Generator Control		None	Yes (One set of DC24V relay dry contacts)			None
Fire Protection Linkage Control		None	Fire Protection Non-Essential Load Shedding (Passive contact input with one set of normally open passive signal feedback contacts)			Forced Transfer to Standby Power Supply (Passive Input)
Switch Failure Alarm Indication		None				With one set of passive contacts
RS485 Communication Function		None			Yes	None
Installation Mode		Integrated Type (Without Display Screen)		Available in Integrated Type and Split Type (Note: Integrated Type without display screen)		

VI.Technical Performance Parameters

Technical Parameter Table

Conventional Enclosed Thermal Current I _{th} (A)	100	250	630	1000	1250	1600	2000	2500	3200
Rated Insulation Voltage U _i (V)	690V								
Rated Insulation Voltage U _i (V)	8KV								
Rated Operating Current I _e (A)	16A, 20A 25A, 30A 32A, 40A 50A, 60A 63A, 70A 75A, 80A 100A	140A 160A 200A 225A 250A	315A 350A 400A 500A 630A	800A 1000A	1250A	1600A	2000A	2500A	3200A
Rated Short-circuit Making Capacity I _{cm} (kA Peak Value)	8KA	17KA	26KA	50KA			55KA		
Rated Limiting Short-circuit Current I _q	120KA								
Control Power Supply Voltage	AC230V								
Transfer Time (S)	0.5	1.1	1.2	1.25			2.45		

VII.Product Installation and Usage Introduction

■ Correct Installation Method of the Switch

A, B, and C are installed correctly; D is installed incorrectly

■ Wiring Diagram of the Switch

Frame Size Current 100A~1600A

Frame Size Current 2000A~3200A

VIII.Terminal Definition

■ Frame Size Current: 100A~630A

Wiring Diagram for Type A, B, C, D 4-Pole Controllers

Wiring Diagram for Type A, B, C, D 3-Pole Controllers

1.External Terminal Wiring Instructions

- 101~103: Status Indication Output for External I (Normal) Power Supply (Active AC220V/0.5A)
- 101: Common neutral for indicator light + 3P neutral input terminal
- 102: Signal output for I (Normal) power supply
- 103: Close signal output for I (Normal) power supply
- 201~203: Status Indication Output for External II (Standby) Power Supply (Active AC220V/0.5A)
- 201: Common neutral for indicator light + 3P neutral input terminal
- 202: Signal output for II (Standby) power supply
- 203: Close signal output for II (Standby) power supply
- 301~302: DC24V Auxiliary Power Input
- 301: DC24V positive pole input
- 302: DC24V negative pole input
- 401~404: Fire Protection Linkage Signal Input & Feedback Signal Output
- 401, 402: Passive fire protection linkage signal input
- 403, 404: Double-open signal feedback output after fire protection activation
- 501~503: Generator Start Control Signal Output
- 501: Normally open (NO) control signal terminal
- 502: Common control signal terminal
- 503: Normally closed (NC) control signal terminal
- 601~603: RS485 Communication Port : 601: A+602: B-603: GND

Notes:

- 1.If the output signal of the fire - fighting equipment is an active signal, circuit conversion for the signal is required. For example: Install a relay for signal conversion, and connect the normally open contact of the relay to terminals 401 and 402. When the normally open contact closes, the dual - power supply switches to the open position. After the fire - fighting function is activated, the automatic conversion stops. To restore the normal operation of the switch, the fire - fighting signal must be canceled first, so that the switch can return to the normal operation mode. For intelligent - type devices, an additional switch of the manual/automatic control switch is also required.
- 2.When the II (standby) power supply is a generator set:
When the I (commonly used) power supply is normal: Terminals 501 and 502 are closed, while 502 and 503 are open.
When the I (commonly used) power supply fails: Terminals 501 and 502 are open, while 502 and 503 are closed.
- 3.For the usage method of the RS485 communication port, refer to the communication protocol.

VIII.Terminal Definition

■ Frame - size Rated Current: 100A~630A

Type F Control 4P Wiring Diagram

1. External Terminal Wiring Instructions
- 101-103: Status indication output for external I (Normal Power Supply) (Active AC220V/0.5A)
 - 101---Common neutral for indicator light + 3P neutral input terminal
 - 102---Signal output for I (Normal) power supply
 - 103---Close signal output for I (Normal) power supply
 - 201-203: Status indication signal output for external II (Standby Power Supply) (Active AC220V/0.5A)
 - 201---Common neutral for indicator light + 3P neutral input terminal
 - 202---Signal output for II (Standby) power supply
 - 203---Close signal output for II (Standby) power supply
 - 301-302: DC24V auxiliary power input
 - 301---DC24V positive pole input
 - 302---DC24V negative pole input
 - 401-404: External control port
 - 401: Common terminal for *active fire protection linkage short-circuit input
 - Short-circuit 401 & 402 → Close for I (Normal)
 - Short-circuit 401 & 403 → Double-open position
 - Short-circuit 401 & 404 → Close for II (Standby)
 - 501-503: External port for switch fault alarm
 - 501---Normally open (NO) control signal terminal
 - 502---Common control signal terminal
 - 503---Normally closed (NC) control signal terminal

Wiring Diagram for Type F 3-Pole Controller

- 601-604: Fault Alarm Ports for I (Normal)/II (Standby) Power Supplies
- 601-602---External Port for I (Normal) Power Supply Fault
 - 603-604---External Port for II (Standby) Power Supply Fault
- Notes:1.If the output signal of fire protection equipment is an active signal, signal line conversion is required. For example, use a relay for signal conversion: connect the NO (Normally Open) contact of the relay to the fire protection remote forced port. Once this function is activated, automatic transfer will stop. To restore normal switch operation, the short-circuit signal must be removed first.
- 2.Description of switch fault alarm ports:When the product operates normally (no faults), terminals 502 and 503 remain closed (NC).If an abnormality occurs (e.g., locked-rotor, incomplete closing), the controller detects the fault and triggers a feedback signal (501 and 502 conduct, dry contact).
- 3.Description of I (Normal)/II (Standby) power supply fault alarm ports:When the input power is normal, the I (Normal)/II (Standby) ports remain closed (NC).If a phase sequence error or phase failure occurs, the ports switch from NC to open (NO) and output a feedback signal (dry contact).

■ Frame Size Current: 1000A~3200A

Fully Automatic Wiring Mode

Fully Automatic + Forced “0” (Both Power Supplies Disconnected) Wiring Mode

Fully Automatic + Generator Signal Output Wiring Mode

Short-circuit terminals 201 and 206

Generator signal outputs when I (Normal) power supply

Fully Automatic + Manual (Remote Control) Wiring Mode

X.Operation Introduction of Split Controller

Note:This controller is designed for electrical devices with a frame size current range of 100A-630A.

For user convenience, the product provides commonly used switching parameters for modification during design. These parameters are preset by the manufacturer before the switch leaves the factory. The default parameters at delivery are as follows:

- ① Undervoltage conversion value of power supply I (common): 187V②
- ② Overvoltage conversion value of power supply I (common): 263V
- ③ Undervoltage conversion value of power supply II (standby): 187V
- ④ Overvoltage conversion value of power supply II (standby): 263V
- ⑤ Conversion delay time: 5S
- ⑥ Return delay time: 5S
- ⑦ Generator start delay time: 5S
- ⑧ Generator stop delay time: 5S
- ⑨ Conversion mode: Grid-Grid

Key Instructions

When the controller is operating, press the Set button to display the parameter setting interface shown in the figure above on the LCD. In the setting menu, press the " $\diamond$ " " $\diamond$ " buttons to scroll through the setting options. Press the Auto/Manual button to exit the setting menu. Press the " $\diamond$ " " $\diamond$ " buttons to modify parameters.

Continued

XI. Use and Maintenance

1. Operating Voltage

The rated operating voltage of this product is AC400V, and the rated operating voltage of the controller is AC230V.

2. Wiring

When wiring the product, strictly follow the incoming line markings. For three-pole products, connect the neutral wire to the neutral terminal. Carry out wiring for fire linkage and power generation control according to actual conditions, and finally ensure the product is properly grounded.

3. Inspection and Maintenance

During the use of the product, conduct regular general inspections. Manually or automatically switch the power supply once to check if the product operates normally. Perform regular maintenance, remove dust, and maintain the product's insulation performance.

XII. Precautions for Unboxing Inspection

When you receive the ordered product, please open the package and check the following items:

1. Verify the product nameplate to see if it matches the order requirements;
 2. Check if the switch appearance is intact and if there is any physical damage caused by transportation or human factors;
 3. Check if the operating mechanism and switch components are loose;
 4. Be sure to read this manual before installation, operation, and maintenance inspection.
- If any problems are found, please contact our company or the local distributor/agent as soon as possible.

Dual Power Automatic Transfer Switch

XLDS2 Series

Application

Clin 欣灵电气

XLDS2 Series Auto transfer switch mainly used for electric distribution network or motor network with rated voltage 380V,50Hz,DC rated voltage 220V, rated current 16A to 3200A, change over between main power and backup power system ,power grid and genset. Meanwhile can be used as isolation of unfrequency making and breaking circuit. It is widely used in the transmission and distribution system and automation system of the important place which not allow power cutoff such as fire-fighting.Hospital,Bank,high building etc

XLDS2 Series ATS accord to the standard:

International:

IEC60947-1(2001) 《Low voltage switchgear and controlgear,part one:General Rules》

IEC60947-3(2005) 《Low voltage switchgear and controlgear,switch,isolator and combined fuse switch etc》

IEC60947-6-1(2005) 《Low voltage switchgear and controlgear multi-function switch:auto transfer switch etc.》

National:

GB/T14048.1-2006 《Low voltage switchgear and controlgear,part one:General Rules》

GB14048.3-2008 《Low voltage switchgear and controlgear,switch,isolator and combined fuse switch etc》

GB14048.11-2008 《Low voltage switchgear and controlgear multi-function switch:auto transfer switch etc.》

Dual Power Automatic Transfer Switch

XLDS2 Series

Performance And Characteristic

- It adopted double complex contact horizontal puling mechanism/micro motor energy pre storage and micro-computer control technology,basically come to Zero arc(no arcing chamber);
- Adopted reliable mechanical interlock and electric interlock,executive unit adopt independent load disconnect switch,it makes more reliable and safety;
- Adopt "Zero Position"technology,it can force to set to Zero Position under emergency situation(cutoff two way power supply,meet the fire linkage requirements;
- Load disconnect switch change over adopt singleness motor drive,switch over smooth and reliable,no noise,little impact;
- The driving motor have instant current across only under the load disconnect switch changeover,stable working status no need to provide the working current,outstanding energy saving;
- Executive load disconnect switch have mechanical interlock,make sure the Normal power and Reserve Power working reliable and no interference;
- Distinct ON and OFF position indicator,padlock function etc.,make reliable and safe isolation between power supply and loading.
- High security,high automatization,high reliability,working life more than 8000 times;
- Electromechanical integration design,accuracy change over,flexible,smoothly,adopt international advanced logical control technology,high anti-interference ability,no interference outward
- Have main power ON,backup power OFF;main power OFF,backup power ON;main and backup power OFF;three working mode(I-o-II);
- Easy installation,control circuit adopt plug type terminal connection;
- Four operating functions:Emergency manual,motor remote control,emergency OFF under auto control status,auto Control operation

Basic Type Switch Control Characteristic

- Suitable for two way main and backup power system,auto change auto recovery;
- Can expand functions by outer connection;
- Auto,Remote,Manual control functions;
- Delay 0.5s signal detect,avoid miss actuation;
- Under Auto control status have "O" position remote control;
- Key switch select the operating mode;
- Can with RS-485 communication port(optional),according to customer required.

Wiring Instruction

XLDS2-100~630

XLDS2-1000~3200

XLDS2 Series

XLDS2-100-630A Auto Transfer Switch Control And Operation (Suitable For Rated Current 16A~630A)

A type Controller

B Type Controller

101~103:main power external indicator signal(Active AC230V/0.5A)

101-Indicator common null line 102-Main power indicator signal output 103-Main power ON signal output

201~203:Backup power external indicator signal(Active AC230V/0.5A)

201-Indicator common null line 202-Backup power indicator signal output 203-Backup power ON signal output

301~302:DC 24V aux.power input for generator start

301-DC24V positive input 302-DC24V negative input

401,404:Fire linkage control signal input and feedback signal output

401,402:Fire linkage control signal passive input,if the signal from fire-fighting equipment is an active signal, must first connect to a small relay,then connect the relay NO point to 401,402,after NO contact closed ATS transfer to OFF position.

403,404:Feedback signal for ATS transfer to OFF position cutoff the load power supply

Notes:when the fire linkage function is active,the ATS will stop working,if want the ATS to working again,must first clear up the fire-fighting signal and then switching the Auto/Manual control switch one time,the ATS will recovery normal working

501~503:Generator start control signal output

When the backup power is Auto start generator,users can connecting the 501~503 terminals to the generator controller to achieve the generator auto start function,inside 501~503 terminal,is a set of passive relay contact point,502 is the relay common terminal,503 is relay NC point,501 is relay NO point;when main power normal,501 and 502 is closed, 503 and 501 open,if main power failure 501 and 502 open,meanwhile 503 and 502 closed,to send generator start signal.

Dual Power Automatic Transfer Switch

XLDS2 Series

Automatic Wiring Method (Suitable For Rated Current 800~3200A)

- HL1 Main power good indication;
- HL2 Backup power good indication;
- HD1 Main Power ON indication;
- HD2 Backup power ON indication;
- FU1/U2 is 2A fuse.
- 101-106, 201-206, 301-306 is RDS2 switch terminal.
- 401-406, 501-506 optional switch terminal for up 630A rating.

Auto+Forced Change "O"Position(For Rated Current 800~3200A) (Fire-Fighting Dual Power Source Off)Wiring Drawing

- HL1 Main power good indication;
- HL2 Backup power good indication;
- HD1 Main Power ON indication;
- HD2 Backup power ON indication;
- FU1/U2 is 2A fuse.
- 101-106, 201-206, 301-306 is RDS2 switch terminal.
- 401-406, 501-506 optional switch terminal for up 630A rating.
